

Uneven skin tone on the body can be caused by a number of factors which include sun exposure, hyperpigmentation or dry skin. Hyperpigmentation (the over production of melanin, which is the pigment that is responsible for the colour of skin, hair and eyes) normally manifests as greyish-brown spots on the skin as a result of repeated, unprotected sun exposure.

Sun exposure is one of the main causes of uneven skin tone. Hyperpigmentation (the over production of melanin, which is the pigment that is responsible for the colour of skin, hair and eyes). Hyperpigmentation normally manifests as greyish-brown spots on the skin as a result of repeated, unprotected sun exposure. Dry skin makes it vulnerable to cracking easily due to low levels of sebum (natural oils) and water. Dry and damaged skin is prone to discolouration and can appear patchy or ashen in nature.

Here at Nativis, we have developed a range of Skincare products to help improve body skin tone. The products are 100% natural in composition, and all contain a natural active ingredient derived from Sericin which we have called Silk Hydra-Fix[®]. This active ingredient deeply hydrates and moisturises the skin. Certain amino acids within the natural active ingredient are also widely acknowledged to regulate melanin production in the skin, giving a more even skin tone over time. Over exposure to the sun can also dry out the skin and the Nativis products we recommend are strongly hydrating and so will overcome skin tone issues caused by dryness. We would recommend applying the Silk Hydra-Fix[®] Moisturising Gel and Cream to the body regions where there is skin tone imbalance. Positive results should be observed using the products described in this package after 3-4 weeks and should improve significantly with continued use.

Products Package for Skin Tone (Body)

Silk Hydra-Fix Moisturising Gel (200g)

Directions for Use - Hydrate the Skin First

1. Apply the Moisturising Gel to those areas of the body (Legs, arms, torso, back, feet) by massaging in gently with the fingers and palms of the hands. It should absorb rapidly and leave the skin feeling soft and smooth.
2. Apply morning and in the evening before sleep. Continue this routine for a minimum 3-4 weeks to see a significant improvement.

Silk Hydra-Fix Moisturising Cream (50g)

Directions for Use - Moisturise the Skin

1. After applying the Moisturising Gel, apply the Moisturising Cream to the same body areas (morning and night). It should fully absorb rapidly. Apply sparingly.
2. After applying the cream, apply a UVA-UVB sunscreen for protection against the harmful effects of UV light (which causes Hyperpigmentation) if venturing outside.

Package Price £37.80 - SAVING 10%

Repeat above procedure daily (morning and night) for best results. Improvements should be seen within 3-4 weeks with skin tone significantly improving in appearance. Continued regular daily use of the Serum and Moisturising Cream should further improve appearance over time and will also maintain the skin in a well hydrated and moisturised condition. If venturing outside in warm, sunny weather for extended periods, reapply sunscreen at regular intervals to protect the skin from the detrimental effects of sunlight on skin tone.
